this problem. Proposed by: David N. Collins, Georgia Section, ASQC.	Jan., 1952	40
PROBLEM 3: Asks for procedures that could serve as alternates to the use of demerits in trying to evaluate the quality level of each of a group of assembly departments. Proposed by: Paul A. Noakes, Indianapolis Section.	Jan., 1952	40
PROBLEM 4: In using probability paper to estimate the mean and standard deviation of a sample, what procedure should be followed in drawing the line that gives these estimates? The usual least squares techniques are not applicable, and a line drawn in to "look" right leaves much to be desired. Proposed by: Thomas A. Budne, Metropolitan Section.	Jan., 1952	40

PROBLEM 5: What is a correct method for computing control limits on Brinnell Hardness readings where the original data are expressed in bolt diameter readings with 5 mm. cell width and Brinnell Hardness numbers involve unequal cell sizes? Proposed by: Gene Manning, Iowa Section.	May, 1952	102
PROBLEM 6: With specs of .001" to .004" (negative values impossible) and a skewed distribution, what method is recommended for estimating the percent below .001"? Proposed by: Harold Macormac, Metropolitan Section.	May, 1952	102
